What's New in the AutoCAD?

AutoCAD incorporates feedback from this new Markup Assist feature that comes with AutoCAD 2023. Here, an engineer uses feedback from a client's suggested changes to a building design. The CAD file changes automatically to reflect the changes suggested by the engineer. Note: Marks and Fashions is not a feature for new users of AutoCAD. (See also: More about Markup Assist.) Professional Edge: Improved inspection capabilities and workflow for quality assurance engineers and inspection professionals, as well as digital document inspection. Now you can create inspection-ready CAD models from the built-in CAD models found in the Drawing Utilities folder. You can use them to help create and organize inspection-ready models for your inspections. When you are working in your "inspection project" and choose the same folder location as the "built-in inspection-ready" folder, then you can use all the inspection tools that are part of the "inspection project" in your inspection project. When you create an inspection project, all the inspection-ready models are automatically added to your list of Project Options. Now, you can use markers and measurement blocks as well as traditional line-crossing blocks to mark defects and areas for inspection. You can also annotate CAD models with the comments that you use in the inspection documents you create. Also: Check out the new AutoCAD.com Tutorials. General Improvements and New Features: Improved feedback and notification when you create or modify a drawing. Added the option to toggle the AutoCAD Help shortcut key in the Options dialog, and it has a new look and feel. Improved the AutoCAD.com and Pro Connect sites. Revised 3D solids options. System-level improvements to ensure you have the best AutoCAD experience. Improved rendering performance. Compatibility: AutoCAD 2023 is designed to work with AutoCAD, AutoCAD LT, AutoCAD Classic, and AutoCAD RLT in every common installation scenario.
