With the release of AutoCAD LT, which runs on a standard PC or Mac, and AutoCAD WS, which runs on a thin client computer, AutoCAD was fully integrated into the Windows operating system. The first release of AutoCAD was for the Apple II, running on a Motorola 68000 and running under CP/M. This was followed by the first release of AutoCAD for the Macintosh in 1984, which was the first ever native Macintosh CAD application. The first release of AutoCAD for Windows, version 2.1, was released in 1988, and it was the first CAD application that could run on Windows 3.0, the first version of Windows with a graphical user interface (GUI). The first release of AutoCAD for Linux, version 1.0, was released in 1997. AutoCAD is fully compatible with the latest release of AutoCAD WS (a CAD application that runs on Windows) and AutoCAD LT (a CAD application that runs on Windows, Mac OS and Linux). Today, over 50 million people use AutoCAD in the commercial sector. A huge number of these users are architects, engineers, contractors and construction workers. What makes AutoCAD unique is that it is both a comprehensive CAD and drafting software program and a web-based application. AutoCAD has the ability to handle complex workflows across multiple platforms. It also provides multiple ways to collaborate and share information with others. AutoCAD is available for Windows, Macintosh, Linux and Microsoft Windows Phone and as a cloud-based service. The free AutoCAD software is provided by Autodesk, which has been in the business of selling CAD software for over 30 years. Who Uses AutoCAD? The vast majority of people who use AutoCAD in the commercial sector are architects, engineers and construction workers. In the U.S. alone, more than one in five people in construction or manufacturing are using AutoCAD to create, design, manufacture or manage construction projects. A big benefit of using AutoCAD is that it is affordable and a web-based application. The cost of an entry-level AutoCAD subscription package is just \$495 per year, but when you add in the extra features and the price starts to rise rapidly. For a commercial software license, the annual cost is anywhere between \$
