Moreover, this method is a more stable approach that uses another technique for generating the The invention relates to a process for the production of mineral fibers or cellulose from synthetic material compositions using synthetic resin fibers as cores of the fibers. The term "synthetic fibers" used herein is intended to describe synthetic fibers of which the synthetic material constituent is a synthetic polymeric material, e.g., polyethylene, polypropylene or a mixture thereof. Known processes for producing mineral fibers from synthetic material compositions are described, e.g., in U.S. Pat. Nos. 3,981,842 and 3,850,875, and in copending application Ser. No. 672,814, filed Dec. 29, 1975. The processes described in those patents require polymer fibers as a core of the fibers. Polymer fibers of this type are generally produced by melt-spinning a polymer and thermally drawing the polymer fibers obtained. However, very soft plastics have not been suitable for producing fibers of this type because the well-known drawing process generally referred to as the "down-drawing" process, as described in British patent specification No. 1,381,179 or U.S. Pat. No. 2,246,029, cannot be carried out on fibers of this type. Instead, other processes are used for producing polymer fibers which are generally much harder and which are therefore suitable for the drawing process. Polymer fibers having a desired strength can be produced from plastics of this kind by drawing the fibers. Thus, German patent publication No. 24 40 648 discloses a process for producing high-strength plastic fibers by centrifuging and drawing. However, the advantage of using synthetic material compositions for producing the core material is that the known spinning processes, such as a melt spinning process or a spinning process in an aqueous dispersion, are suitable for producing polymer fibers. These fiber types are typically much more expensive than polymer fibers obtained, for example, from thermoplastic resins. Thus, the known processes using synthetic material compositions have not been able to produce useful mineral fibers at reasonable costs. It is an object of the invention to provide a process for producing mineral fibers which have a mineral wool-like appearance from synthetic material compositions. Category:Computer-related introductions in 2011 Category:2011 software Category:AutoCAD Category:Computer-related introductions in 2012 Gameloft has sold more than 8 million downloads of "Le Maréchal", its game based on the popular French television drama "The Marshal", which will be made available in the US on November 11th. "We can't say it enough: 'Le Maréchal' is a huge success in France and has been one of our best-selling titles since we started", said David Turek, CEO of Gameloft, which has released more than 10 titles based on popular French television dramas in the past few years, including four more for the "The Marshal" franchise. The first title in the "The Marshal" franchise was "The Marshal's Cabinet" in 2012, with the latest installment, "The Marshal's Justice", launching in the summer of 2012. Gameloft's current hit "Le Maréchal" features The Marshal, a former hero turned lawyer, who has become involved in a drama all his own. The game sold 1.3 million downloads in 2013, and 2.3 million in 2014 in France. The game was released in the US on November 11th.Q: What is the difference between some source definitions of Sake? There are some different comments on the internet about the source of Sake. Some say that it is distilled from rice, others that it is rice that is distilled, and others that it is uncooked rice. I am curious to know the actual history of Sake: If a beer is beer, a whiskey is whiskey, and a wine is wine. What about Sake? Where does the name come from? I do have a vague idea that it was supposed to come from China, and that it is/was traditionally drunk by Japanese nobility. But for what century were its origins? A: Here is the story as I understand it. It may be wrong in some of its details, but my impression is that it is close enough to the truth as to be good as a starting point. I am going to answer the three questions you asked, separately and in that order. The question, "Where does the name come from?" From 3da54e8ca3
