VERSION 1.2, compiled on December 31, 2006 This is the free edition of ClickyMouse - a feature-rich software application that provides tools for recording and playing macros with customized properties. The installation procedure takes little time to finish and does not require special attention from the user. The interface has a well-organized structure where you can organize macros into groups. It is possible to create as many macros as you want. Properties include the name, description, playback speed, repeat time, and mouse event trigger (e.g. button click, shake horizontally). As far as commands and system variables are concerned, you can send key strokes, insert comments and date/time stamps, input logical data structures (e.g. wait, if..else), show messages, open web pages, and so on. Plus, you can use a search and replace function, remove multiple timing or mouse move commands, enable word wrapping, import macros (from file or Clipboard) as well as save them to file for further modifications. Log details are recorded to file. ClickyMouse offers multilingual support, has a good response time and runs on a very low amount of CPU and RAM, so it does not put a strain on computer performance or interrupt normal user activity. We have not encountered any problems throughout our evaluation. ClickyMouse Standard Edition unlocks extra features, such as macro export to HTML format, GUI password protection, status bar, and the ability to disable macros and macro groups. The full power of the program can be seen in the professional version, where you can enable AES encryption for macro files to protect content, as well as generate a "Free Macro Player" file that can be used by other people freely, just to name a few features. All in all, ClickyMouse Free Edition is a pretty resourceful application when it comes to recording and playing macros, and it should particularly please advanced users. What's New in the?

ClickyMouse (www.clickymouse.net) is a macro recorder/player that allows you to create and playback your own keyboard and mouse macros. ClickyMouse is distributed under the terms of the GNU General Public License (GPL). If you want to use ClickyMouse you have to download and install this edition which will provide the key features for free, such as an easy to use interface, a built-in GUI, a multi-platform installer, multi-language support, rich configuration features, and the ability to record your own mouse and keyboard macros. A full version of ClickyMouse can be bought as well, with more powerful features, such as an AES encrypted macro file that cannot be altered by other users or seen by any other system, a customizable GUI and a USB port for accessing your macros. ClickyMouse Free Edition is a fully featured alternative to ClickyMouse Standard Edition which is sold by the author. It has a simplified and clean interface and can save macros into the XML format, which is easy to edit and export to other applications. This version offers no "write once, play everywhere" capability, which is the basis for being free. However, it includes many features that cannot be found in standard editions, such as a built-in status bar that can display system or macros' information, and mouse and keyboard recording capabilities (including text highlight and mouse pointer positioning). Most importantly, it can be fully used as a "free" tool for recording mouse and keyboard macros. ClickyMouse Free Edition can be used from a CD or mounted on the hard disk (if you have the administrator rights on the computer), although it is recommended to use the full version. Installation: If you have a CD with ClickyMouse Standard Edition or ClickyMouse Free Edition installed on it, insert the CD and reboot the computer. ClickyMouse will start automatically. If you have ClickyMouse Free Edition on your hard disk and you do not have a CD with the Standard Edition, follow the below instructions: 1. In the Desktop folder, create a shortcut of the ClickyMouse Free Edition application. 2. Go to the "Start" menu and right-click on the "ClickyMouse Free Edition" shortcut. Then select "Run as Administrator". 3. When prompted, click on "Run" and when the installation is complete, ClickyMouse will start automatically. Note: if you get an error message about "You cannot create shortcuts to a folder on a read-only disk", double-click on the shortcut. To change language of the interface, go to "Preferences", click on "Language" and select a language from the list. To change the appearance of the program, go to "Preferences", click on "Appearance" and select a theme from the list. Common Installation Problems: Running ClickyMouse Free Edition: Pro
