Several of these objects have been documented by various observers who have claims to reliable first-hand knowledge. Jacques Vallee, author of Messengers of Deception (1971), used chaos fish as an example of a theory that presented the stars and the cosmos as being produced by some form of intelligent life. Chaos fish has been used to describe various entities. In 1971 Jacques Vallee, author of Messengers of Deception, referred to them in describing encounters of the second kind. Designed by Svante Venerno in 2004, XiPodizer has been the only app with nonlinear filters for Windows and Mac OS X that enable users to make discreet changes in the shape of the waveform to achieve interesting effects. As waves have a sinusoidal shape, any change that makes it symmetric or asymmetric is called waveform apodization. There are several linear and nonlinear techniques for performing these changes on the amplitude and phase of the original wave, and most of them have been described in the literature. XiPodizer is not only a waveform apodization tool that can modify and optimize audio signal quality, but it is also a multi-format recording and editing tool with the following powerful features: 1. Perform an automatic resampling at the same rate that is used by the input format or custom sampling, which is useful when transferring recordings from one format to another 2. Transpose the file in an efficient manner 3. Apply different levels of compression, to the best of our knowledge no other app can do this 4. Apply a high-pass frequency filter, a low-pass frequency filter or a bandpass frequency filter 5. Combine different filters in a single file 6.
