A: I figured it out! Go to 'Program Options' --> 'Options' --> 'Settings' Click on the 'General Options' tab Click on the 'Uninstall or Repair Autodesk Autocad' button A: Autocad 2018 keygen is available for Windows 8.1. Q: Read the content of an Excel file, fill a Python dictionary, and save it to a CSV I have an excel file like this: Book1.xls 1: 1.Mice 2: 2.Cats 3: 3.Dog 4: 4.Chicken 5: 5.Ducks The first column is the identifier of the entry, the second is the content. What I want to do is: Go through the Excel file and read the identifier and the content Fill a Python dictionary with the content Save the dictionary to a CSV file How can I do that in Python? A: The easiest way to do this is to use xlrd. The first step is to open a workbook and get a list of worksheet objects. `import xlrd wb = xlrd.open_workbook('Book1.xls') ws = wb.sheet_by_name('Sheet1')` You can access the individual cells of the worksheet by calling `ws.cell(row, column)` or `ws[row, column]`. The cells have methods like `cell_value()` to get the string value and `cell_format()` to get the value as a string in a specific format. `row = 0 col = 0 def cell_value(ws, row, col): cell = ws.cell(row, col) return cell.value # or cell_value = cell.value` Cell values are stored as strings in the worksheet; the method `cell_format()` returns the string value, formatted

This feature is similar to the existing Edit Filters command that has been available since AutoCAD LT 2007. Filters is a powerful new feature that can be used to quickly create a selection of parts of your drawing based on geometry, drawing properties, or a mix of these. Filters are used with the Direct Selection tool and are available as a separate menu item or as an item in the existing Edit Filters drop-down menu. This allows you to perform drawing actions on selected features. You can select features on a drawing, convert them to objects, copy them to the clipboard, and so on. See "Using the Apply Filters command to modify drawings" on page 8 to learn about the features of this command and on page 9 to learn how to use this command to select, copy, and paste feature information. Right-click the filter drop-down list to open the Filters dialog box.
