Features AutoCAD is used by architects, mechanical engineers, drafters, graphic designers, illustrators and students to create and edit 2D and 3D drawings. Its primary features are as follows: 2D drafting and editing 2D drawing creation, viewing, modification, editing, measurements, shading, printing, exporting and sharing. 2D curves: AutoCAD supports straight and circular arcs, as well as other segments, splines, and Bézier curves. 2D dimensions, text and other annotations: Shapes can be annotated using shapes, text objects or dimensioning, thereby creating annotation zones, offset text and dimensions, multiple-segment dimensions, shape offset distances, and placement tables. 2D raster: Two-dimensional raster graphics can be edited as 2D polygons, solid fills, linetypes, gradients, and transparency. 2D text: Text can be inserted using Freehand or shape objects. 2D objects: AutoCAD supports 2D polylines, circles, ellipses, rectangles, and arcs. A 2D arc is the 2D generalization of a 3D arc. These objects can be connected with lines, surfaces, cylinders and cones. 2D graphics: A variety of geometric and pictorial 2D forms, including rectangles, arcs, ellipses, lines, circles, and curved polygons, can be created using the straight and curve tools, and displayed on the screen or saved to disk. Images can be inserted as layers. 2D images can also be exported as DWG or DXF files. 2D symbology: Symbols, such as axis labels, title blocks, icons, freehand text and special symbols (such as text frames, bullets, and arrows) can be inserted using the Symbol Manager. They can be be linked using a routing area. 2D layers: Layers can be used to hide elements and reduce clutter. A user can create, delete, hide, lock and move layers. Two or more layers can be used to establish a baseline for drafting and create

Q: How to increase the hit counter of a wordpress blog We recently launched a new website with the tagline "The world's most trusted source for multi-lingual news" in the home page. While the new site and our old site is the same in many aspects, I cannot see any difference in terms of hits. Which we can attribute to the tagline. Is there any way to increase the hit counter of the tagline itself? Or do we have to wait for a month and see the difference in hits ourselves? I am using wordpress for the website. Thanks A: You may be interested in this. You can increase the number of page views for a URL by adding a description. A: You could also try increasing the number of impressions: A: Thanks for the tip. The solution worked and helped me to see the correct hit count.
