
Buddha.dll Hitman Sniper Challenge.rar

I installed this game and when I start the game, buddha.dll pops up. Missing statement plz... help by verifying any link to download buddha.dll . I've looked at this SO question, but I can't seem to add a file download link here. The file I am currently using is located here: C:\\Windows\\System32 . The buddha.dll file I get is: C:\\Windows\\SysWOW64 . Update 1 I searched on Google and I figured out it had to do with how I installed the game. I created a new Microsoft account and my current account has been deleted. So I used a Microsoft account that I created and it works fine on Windows 10 1809.
