The software has been around

---

for many years and is now  
seeing its newest  
version—Adobe Photoshop  
Lightroom—used in the  
production of films. Some of  
the major areas of use  
include: product photography  
and retouching painting,  
drawing, and clay modeling

---

image editing photo/video  
retouching We will provide an  
overview of the main  
components of Photoshop  
from a beginner's point of  
view. 1. Getting Photoshop &  
Photoshop Elements The  
basic program is pretty much  
ubiquitous with the Apple

---

products that come with it on the OS, namely Mac OS X and iOS. Whether you buy a Mac or a PC, or even an Apple mobile device, you'll have access to Photoshop, Lightroom, Creative Cloud or Elements. Some of the earlier, older versions of Photoshop,

---

like CS2, CS3 and CS4, are no longer available; you'll have to upgrade to CS5 or CS6. You can download the Free versions of Photoshop (CS2, CS5, CS6, CS6.5) from Adobe's website. The premium Photoshop Elements (CS4, CS5, CS6) can be

---

purchased via the regular website. 2. Opening Photoshop & Photoshop Elements The mouse will be the most important tool to you when using Photoshop, as you will need to select and move things and click on them to perform tasks. Photoshop can

---

be opened by double-clicking the icon on the desktop. A new window will open and you can then create a new file. On iOS devices the icon is named Photoshop.app. In Photoshop Elements, the icon is named Photoshop CS4. A new document opens,

---

providing you with the brush, history, and tools. 3. The Drawing Board A new canvas is provided with Photoshop (and elements) that can be locked, resized, and dragged around. There are a number of shortcuts that enable you to zoom in and out to different

---

levels. Opening the top menu of the canvas, and then the toolbox will reveal several tools: 4. Camera & Photos

There are a number of tools and menus available to help you with your photo editing. When you first open the main menus, there are a number of

---

options available, including:

We are in the midst of a revolution. Our ability to embrace renewable energy has never been better and the reduction in the cost of solar equipment and storage has never been faster. However, to achieve self-sufficiency at scale, we need to start moving

---

beyond ideology. It is incumbent on us to consider how we can collaborate, what individual and collective action we can take, and find sensible approaches to gathering, sharing, and dealing with the ever-growing amounts of energy

---

information. There is no one solution, and there is no single group of winners that would dictate it. Instead, we need to develop informed partnerships with stakeholders across the U.S. energy sector and come together to design workable rules of the road that support

---

everyone's interests. We need to respond to climate and pollution concerns with a new level of ambition and commitment. This strategy is aligned with DOE's ongoing efforts to develop and deploy cost-competitive, zero-carbon technologies on a national

---

scale — from replacing  
baseload power plants with  
innovative alternatives, to  
helping communities build  
their own renewable energy  
solutions, to helping the  
distribution and transmission  
systems face the new  
challenges of more

intermittent energy generation. The agency's mission is to “ensure America's energy security by developing and deploying new energy resources, reducing our dependence on foreign oil and pursuing energy efficiency.” To achieve this, the agency

---

operates the world's largest network of laboratories to study and develop new technologies. Working with the International Renewable Energy Agency (IRENA), it is also increasing its international commitments through programs such as its

---

International Solar Alliance  
and Climate and Clean Air  
Coalition to Ratify. IRENA's  
renewable energy goals are  
bold — to more than double  
renewable electricity  
generation and energy  
efficiency in the Organization

and Development (OECD) by 2050. These goals must be achievable and the path by which they are achieved must be sustainable. As EPA works to meet its legal obligations in support of our Nation's Climate Action Plan and protecting human health from

---

air pollution, it will partner with IRENA and countries in the United States, Europe and Africa who share these objectives to help them achieve them. The agency continues to explore the opportunities and challenges of the many options available

to achieve energy security,  
competitiveness, and  
environmental stewardship. In  
the months and years to come,
