the main functionality of the software is really useful. at first, i started working with the software. i like the feature of the software called "preview". it allows you to see what you want to capture before you capture it. in fact, it is good to change the settings in time. the iwantsoft spymouse features include: mouse movement tracking mouse clicks are also recorded mouse button states can be monitored mouse wheel movements can be captured alerts are sent to you. iwantsoft spymouse is a portable application which can be run in standalone mode or can be enabled to start when windows is started. the spyrix personal monitor is a paid, professional version of spyrix free keylogger. spyrix allows you to see everything that is said on your computer screen, capture keystrokes and mouse movement, set alerts, start on login and more. spyrix can be run with a hotkey (ctrl+alt+a) or run command (runkey)

and can be protected with a password. most keyloggers can be installed with a simple.exe that will pop-up a window and prompt you to enable the keylogger and save that information to your specified location, but spyrix goes a step beyond this with a comprehensive, real-time, multi-function interface. while all of spyrix's controls are done through the advanced interface above, the free spyrix personal monitor still has very helpful troubleshooting features. for example, you can click the settings button and then click the individual tabs at the top of the window for a more convenient way to browse the settings.
