each section folder contains a texture and some midi files. the texture consists of key played on the harmonium. it's a really simple synth and key so it works well with many other sounds and in many keys. you can simply copy and paste this into a track and everything will be fine. i've even got a few midi files for the harmonium just in case. all in all, we're pretty happy with this piece. it has a well-thought out design and is presented beautifully. the samples fit the settings perfectly and the articulations and samples in the extra sections are also beautiful. we tried hard to make sure the small details like the tiniest articulation and the least articulated articulation would suit the room perfectly. it's worth noting that although neo is presented as one unified file, there are still several different settings folders. these relate to the specific articulation setups of the different sections. this means you can make really powerful and useful templates if you know the precise effects and articulations that you want to use. we'll have a set of tools for you to do this with. although a smaller library than the previously reviewed trax electronics kore, these performances have a far more characterful feel and fit comfortably in a smaller production. there are a few extra sounds in here, and they work. but as with all the libraries in this series, real music making comes down to writing, you. more legato treatments for horns, or contrasting chords for a brass line, perhaps, are just the things you need to really take these new sounds to the next level. spitfire have taken the time to build up a truly innovative collection with this first release in an unparalleled series of australian-designed analogue libraries. as you would expect from spitfires roots as a drummer, there are many percussive sounds here that are perfect for keeping time in film and tv, in one-shot situations, in a series of footwork-like compositions, and in between stages and parts in larger productions. if you are looking for a slow-growing library that you can build your way out of, then these libraries are for you. if you're looking for a fast-growing library that will shine a light on your productions, then these libraries are for you.

if the long list of sounds and effects in these libraries was not enough to qualify them as "progressive," the team behind these libraries has also included comprehensive instrument manuals, a synthesizer tutorial, and no fewer than 9 tutorials covering the basic functionality of each instrument. there are also tutorials covering microphones, audio processing, layering and separation, mixing and mastering. this section especially deserves mention; here spitfire have provided a detailed masterclass where the libraries are used to demonstrate how to implement advanced techniques like distortion and chorus, in a way which makes them easy to comprehend. for more information please do not hesitate to contact us. the first of two ways in which albion solstice departs from its origins in the earlier albion libraries is in the use of real instruments and not just analog instruments. since spitfire has always been influenced by the need to provide a good reference instrument, we have decided to use the same roland juno 6 synth which can be found in most of the earlier libraries as its overachieving partner in crime. the juno 6 is a monophonic oscillator plus 5 analog filters (with 2 analogue 5-band graphic eqs) and a multimode mono dac. the real-life juno 6 provides a cool, modular sound which many users have compared to the roland jupiter 6. the juno 6 is fairly easy to program, so the idea was to follow the traditional design with clean, crisp articulations and the inlet and microphonics designed for sustained notes. as with the production ethos of the albion group, albion solstice presents the user with an intuitive and accessible interface. to make the job even easier, the juno 6 is accompanied by a semi-modular workbench which functions like a traditional juno 6 arpeggiator: for every sound selected, an inbuilt sequencer can be programmed to play a series of notes within a specific range. this inbuilt sequencer also keeps notes from the original instrument, so for example if a patch has a chord, each note in the chord will be in the same sequence as the one which contains the chord. 5ec8ef588b
