

WinSuperKit Crack Activator X64

WinSuperKit Download [Win/Mac] (Final 2022)

... WinSuperKit Crack Mac is a strong network package tool that is used to list ip and MAC addresses of all PCs on your home LAN. It finds the IP address of a special host or the host name of a special IP address on internet or intranet, it pings a host, traces routes and displays the geographical location of the IP address. The program can capture network packet, monitor network speed and compare files. WinSuperKit Description: ... SuperConnect is a networking utility, capable of detecting IP and MAC address of any networked computer and display information about them. It is also able to list all connected or disconnected users on the LAN, as well as ping the host's IP address to check its connectivity. Its ping also pings special IP addresses (Gmail, Facebook, etc.). Features: Detects IP and MAC address of any computers on the network Lists all connected or disconnected users on the network Displays information about all of them Pings a special IP address Ping a special IP address Ping a special host name Ping a special IP address Ping a specific user's host name Ping a specific user's IP address Ping a specific domain name Ping a domain name Ping a special domain name Ping a special host name List all the subdomains of a specific domain name List all subdomains of a domain name List all the users on a specific domain name List all the users on a domain name List all the domains of a specific host name List all the domains of a host name List all the users on all the domains on a domain name List all the users on all the domains on a domain name List all the domains of a specific user List all the domains of a user List all the domains of a specific user List all the users on all the domains of a user ... SuperConnect is a networking utility, capable of detecting IP and MAC address of any computers on the network and display information about them. It is also able to list all connected or disconnected users on the LAN, as well as ping the host's IP address to check its connectivity. WinSuperKit Crack+ Keygen Full Version

KEYMACRO is a smart Windows Network Packet analyzer tool. It can capture the packets in the network and analyze the IP and MAC address on the captured packet. It can find out the location of the IP and MAC address with their geographical information. The program is for computer network administrators, network engineers and other IT professionals. It helps you to analyze the IP and MAC address quickly and find out the route, node and MAC address of a target machine, display location of the target IP and MAC address, monitor network speed and compare two files. You can analyze all the packets captured by the program in real time and the packets captured by the program can be played in the packet sniffer in real time. You can modify the settings of the packet capture process and make the process capture only the selected IP addresses or only the selected MAC addresses and display them. You can select the capture process by filtering packet source and destination MAC address. KEYMACRO has the following key features: 1. Capture all the packets from the target computer or network and display their IP and MAC addresses, routes and nodes. 2. You can modify the filter settings of the packet capture process and choose the packet source and destination MAC addresses for capture. 3. The program can display the geographical location of the IP address and the MAC address. 4. The packets captured by the program can be played in the packet sniffer in real time. 5. The program can monitor the network speed and display the traffic of each computer. 6. The program can compare two files and display the difference of two files. 7. The program can be started and exited as a service. Software Version KeyMacro 5.1 for Windows 10, 8.1, 8, 7, Vista, Server 2008, Server 2008 R2, Server 2003 SP1, XP SP2, XP SP3, 2000 and NT 5.2. Additional Information: The program shows information about the IP and MAC address of all the computers in your home, office or workgroup, how to change these information, route to these computers and host name. KeyMACRO is an advanced network packet analyzer, which can trace all the routes and IP addresses, monitor the speed of the network and compare two files. It is a powerful packet sniffer that is used by network administrators and IT professionals. 1. Capture all the packets from the target computer or network and display their IP and MAC addresses, routes and nodes. 2. You can

WinSuperKit

WinsuprKit is a complete network program package tool that is easy to use, with an interface that's easy to understand, convenient to use and easy to install. Using this packet analyzer, we can monitor and trace all inbound and outbound packets on a specific port on a computer or on the entire local network, so we can know exactly what computer is listening to what port and what computers are sending to which computer. WinsuprKit can be used as a sniffer, a tracker, a redialer, a package analyzer and a network speed monitor. WinsuprKit supports NetBIOS, SMB/CIFS, AFP, HTTP, FTP, and TELNET protocols. Features:

- Selector for hosts or IP addresses, with an intuitive and friendly interface.
- Network analyzer, packet sniffer, monitor speed, detect the source and destination of each packet, monitor the net speed, show the number of incoming and outgoing packets per IP address.
- An active trace, and identify the source IP address, host name, host address and ports of every incoming or outgoing packet.
- You can set a specific host for monitoring, a list of addresses, IP address, Port number, Domain name and User name, then you can capture and trace all packets from this computer.
- Capture network packets, monitoring the speed, monitor and capture the source and destination of each packet and you can track the route of packets.
- Displays the geographical location for each IP address.
- The program contains a powerful packet sniffer, capture network packets, monitor network speed, detect the source and destination of each packet, monitor the net speed, show the number of incoming and outgoing packets per IP address.
- Compares files for reverse network package search, finding all possible connection paths between host and IP address, calculate the number of connection paths for the IP address.
- Files are browsable for reverse package search, get a complete map of network traffic for the IP address, get a comprehensive network diagram.
- With the built-in URL, analyze HTTP, FTP, SMB, TELNET and other network traffic, and visualize the paths, find the source and destination of each packet.
- Copy packet (file-by-file) capture, re-create and analyze network packets at a time.
- Supports 802.11 wireless networks, including AP, PTW, RTSP, TELNET, H
