Tamil The use of the term 'Tamil' is ambiguous since it is an ethnonym and a language, as well as an adjective and a noun. The name Tamil refers to the Tamil language. The Tamil diaspora form a major population in parts of Africa and India, making up the majority of the United States, Trinidad and Tobago, and Sri Lanka's Tamil minority. In recent years, many immigrants to Western countries have been Tamil, due to rising unemployment in their home countries, the effects of the 2004 Indian Ocean earthquake and tsunami, and the increase in a number of terrorist attacks against their communities. Although today's Tamil language and culture is represented by communities in the Indian states of Tamil Nadu and Sri Lanka, the language and culture are also shared by those living in the Canadian province of Ontario and the United States of America. History In the following timeline, British rulers of India based in Madras or the Presidency of Madras are referred to as the Presidency; in British India, they were also called the North-Western Provinces and had been a major administrative centre until the British acquired a foothold in the peninsula as the Nawab of the Carnatic in 1784. Tamil language and culture are often discussed in terms of the wider South Asian cultural region, and specifically in relation to the states of Tamil Nadu and Sri Lanka. Tamil Nadu is the largest state by area and population and has the most widely spoken language, Tamil, while Sri Lanka, despite being a majority Sinhalese state, has a large Tamil population in the northeast, along the east coast, and also in the north, which contains many Tamil refugees from the rest of Sri Lanka. Some Tamil speakers also live in Malaysia, Singapore, and Canada. The Tamil ethnic group in Malaysia makes up 13% of the total population, with the vast majority of them living in the state of Kelantan, while the Tamil ethnic community in Singapore is one of the largest in the world, and accounts for about 10% of the total population. The Tamil community in Canada comprises roughly 40% of the Tamil community in Canada. History The earliest known developments of Tamil language occurred around 1200 B.C.E. in Tamil Nadu and this language is known as Proto-Tamil. The northern Tamil language in Sri Lanka has the earliest written form of the language in approximately around 200 B.C.E. Most of the texts of Tamil literature originated from the early medieval period onwards. The

I would like to have a single link in my HTML page that takes user to facebook page "Facebook event", and then this Facebook page displays some details of the event in a short form like that: I.e. I need to automatically detect the location of the event (coordinates) and just put this coordinate right in the link for the user to see. Is it possible to do that in a single HTML page by finding out the location of the event from the Facebook page? A: You can use the Facebook Graph API. This code snippet will return the coordinates of the event: \$facebook->api('/location/events/535394679/'); You can then use this information to display the event details on your site and in the link provided by Facebook. Last week, the government's agreement to 79a2804d6b
