What It Does: The Magic Wand allows you to select like-colored areas of an image by either clicking and dragging or selecting multiple areas. The Selection Brush allows you create selections by clicking and dragging a highlighted object. The Pencil works much like a pen or a marker and allows you to go over or in between the edges of an object in a photo. **What It Does:** Photoshop's Move tool keeps track of the key points in selected areas. After you press the M key, a crosshair will appear if selected items are viewable, and a line will be drawn between them. You can click and drag or press 1-5 to move the selected items. This allows for quick repositioning of objects in an image. To scale an object or piece of text, you can either use the Zoom tool or press Ctrl + Z. **Renaming Objects:** You can select multiple objects and rename or change the name of an object. Select multiple objects and press the M key. You can then press the T key to rename the selected objects. If you want to change the name of a single object, you can use the command, for example, *mTexttool /s/sText/sText2*. This will replace the first word with the second word in the object's name. Let's say you already have a text layer called "My text layer". If you type "title", press the M key, a new text layer is added with the new name. You can review your text layers in the Layers Panel and rename them. **How to Find Text in Photoshop:** How do you find all the text in a photo or the text you want to work with in the picture? Select one or more layers and press the C key to open up the Select menu, then choose All Characters. After selecting text at one time, then you can use the text with to work on your image. To find a specific character in text, you can use Ctrl + I and then select that character from the Character Select dialog box. You can use it to insert special characters into your text and it even allows you to select text that can't be seen. You also have the Text tools to work with text directly. 933d7f57e6
