I am a licensed photographer. I've been using elements for many years, and I've used Photoshop before either. I like the results of elements because it is something I don't really need to learn, whereas I needed to learn Photoshop (and the other Adobe programs) to get the same quality. Maybe I've just been using it wrong all along. The new edition of Photoshop Elements lets you adjust things about the images, like add a grid or add an overlay. The grid adds a line that automatically adjusts the size of the image to fit a certain size. The lines and boxes in the new version of Photoshop Elements are good, but the edge-shading options are limited. I like the ability to make a box frame out of a box, but I often want to use the white space, so having more options and being able to have gradient effects would be helpful. With the new brand of spacing, it will be interesting to see what they do with it in the future. Maybe Adobe sees it as adding a new feature to make it easier for new users to get used to the different image editing. From the Apple version, the best thing they could do would be to make it so that you can automatically create a book, with the page sizes and styles you have selected, and fill in the text easily. I've seen apps that do that, but they cost several hundred dollars. Today we elevate the creative workflow through Apple and Adobe partnership through new devices and features. With Apple Pencil, the future is here with pixels — digitally crafted on the digital canvas. We live in the digital age, and devices worthy of the art are here.
