The upgrade will grey out the Edit Ability panel in the Mask area. I was afraid that would happen. However, the Edit Selection panel, which is also part of this new version, offers a preview of the mask's result. You can also use the new Edit Selection panel to easily select and delete objects using the Edit Ability panel. Another new feature is live, responsive masking. The user simply drags their cursor around a mask on an image and, as long as the cursor is inside the painted area, the outline is updated. The Live Masking also works with Layers (but not Channels). Editing pixel information has always been the primary purpose of layers, and this feature is certainly a handy one. It also means that ad hoc selections can be made that will track over different layers or even pixels. What I like most about the new Live Masking option, though, is the fact that it will immediately paint your mask around the disregarded section.

Fortunately, Photoshop Elements does not have to be a full-fledge software package. Elements remains a package that mostly focuses on editing. In fact, the interface is laid out in such a way that, once you get comfortable with it, you're much less likely to need to use it. In fact, I have actually found the Elements interface to be relatively easy and intuitive. The only real problem I've had was with the new work flow. The new Live Editing is here to simplify tasks, so unfortunately you won't be able to simply adjust a single layer. So, if you've got these tools, it's probably a good idea to stick with the old style.
