Prepare to Die Edition. [What's New] - Update to version 1. 9. Download
Release Guide. DARK SOULS · Prepare to Die Edition Torrent. Night Dawn
Collection included. Q: Getting "No index created for collection" after
deploying to mongoose? I'm trying to deploy a simple react-typescript +
mongoose + mongoose-auto-migrate app (reference) on heroku. I ran the
sequelize-auto-migrate migrations from the root directory of the app, as
described in the (setting the default parameters to include new and skip)
The output, as expected was a big list of index definitions for my collection.

```
[ { "tableName": "Assets", "name": "assetId", "key": "asset_id" }, {  
"tableName": "Projects", "name": "projectsId", "key": "projects_id" } ]
```

I then deployed it and got the error: No index created for collection 'Assets' From inspecting my migrations, I can see it's supposed to create the AssetsIndex: Schema.index({ assetId: "ASC"}); Going through the migration with the --dry-run flag, I found the index creation was actually not running: [{ "tableName": "Assets", "name": "assetId", "key": "asset_id" }]
