Complete collection of ziyarat nahiya urdu pdf downloadQ: Using reduce in filter funciton I am trying to use reduce to filter some data from an object to show only the ones which meet certain conditions. This is what I have: { posts: [{ title: 'hello', description: 'blah blah blah...' }, { title: 'hi', description: 'blah blah blah...' }] } And I want to filter the posts to only keep the ones which have a title that matches a given search query. I am doing this, but it is not showing the results: filteredPosts = posts.filter(post => post.title.toLowerCase().includes(searchString)) Can someone please tell me how to fix the above code so that it only shows the matching posts? A: filter method will never return array, it returns a new object. For example: var result = [{ foo: 1 }, { foo: 2 }, { foo: 3 }] result.filter(function (el) { return el.foo > 0 }); result is now [{ foo: 3 }] If you want to keep original array you can add .slice(0) And let's say you want to use reduce. The solution is very simple, just use map: posts.map(post => post.title.toLowerCase().includes(searchString)) And it's also not required that you convert title to lower case. You can: posts.map(post => post.title.toLowerCase().includes(searchString)) It will filter out any uncapitalized letters. *A portion of the proceeds from the sale of these books will support the Kentucky School Shooting Archive Project.
