They want you to use a service of some sort as a proxy - MakeMKV_HOME\bin\runtime.exe. I tried to do a batch script which runs a new instance of the MakeMKV service, but the commandline calls in the script didn't work due to some syntax that I can't remember the name of. Note: If you're using a Mac, makemkv has 1.8.14 with these features, but with a Mac, you can open the ~/.config/makemkv directory and drag and drop the installation files to the Applications folder. All the links I provided are fine. MakeMKV 1.7.7 Portable was

(26-06-2011) iSpie makemkv 1.7.8 Portable Free DownloadThe behavioral and psychological disorders of childhood and adolescence (DBPCA) are among the most common and debilitating conditions of childhood and adolescence. These disorders reflect the outcome of complex interactions among genetic and environmental factors. This application is for a NIMH Center grant. The overall goal of the Center is to identify genes contributing to DBPC and to provide insights into the pathophysiology and pathogenesis of these disorders. The Center will address the following specific aims: (1) to locate genes for DBPCs, (2) to perform a genome-wide search for the genetic causes of DBPCs, (3) to test pathways of vulnerability to DBPCs, (4) to test the effects of therapeutic interventions in DBPCs, (5) to test novel treatments in DBPCs, and (6) to test gene-gene and gene-environment interactions in DBPCs. These aims will be addressed by the following projects: (1) the Molecular Genetics Project will identify genetic factors underlying DBPCs, focusing on trios in which one parent is affected by DBPCs, (2) the Treatment Projects will test novel and established therapeutic strategies in DBPCs, and (3) the Epidemiology Project will analyze various environmental risk
