History In December 1981, Autodesk Inc. released AutoCAD Download With Full Crack as a computer-aided design (CAD) package for the Atari 8-bit family. Software engineer Ed Simons worked on the package for nine months. The development team focused on implementation of a vector-based drawing system that simulated an artist's traditional pencil and pen-and-ink drafting style. In addition to vector-based drawing, it also added drawing features for drafting and engineering that were previously only available in mechanical-drafting CAD packages. One feature included 2-dimensional (2D) dimensioning, where rectangular items such as boxes, beams, channels, columns, and girders were automatically dimensioned and added to the drawing. (The drawing itself was still vector-based, but the objects were 2D.) Vector-based drafting was first implemented in the 2-D graphics mode, which used dots to represent a line. If the line is then snapped to a set reference point or angle, it becomes a 2D dimension. Dimensions can also be dimensioned with the drawing. AutoCAD 1.0 was followed by a major revision in 1983 called AutoCAD LT. The LT package was available only as a disk drive, which took hours to install, but unlike older disk-based CAD packages, LT had the capability to be installed on a single 3.5 inch floppy disk. The first edition of AutoCAD LT was available for the Apple II family of computers and had six drawing modes: 2D drafting, 3D drafting, architectural drawing, mechanical drafting, electrical schematic design, and mechanical engineering. LT was supported by the $69.95 AutoCAD 1.x series until 1989. In November 1983, Autodesk released AutoCAD 1.5 for the Apple II, HP-3000 and IBM PC computers. It was the first major upgrade since the introduction of AutoCAD LT. 1.5 introduced the Dimension line in the 2-D graphics mode and the Intersection line in the 3-D graphics mode, replacing the old 'J' and 'K' lines. Another improvement was the addition of an alpha channel (gray scale) in all drawing modes. On September 11, 1984, Autodesk announced the introduction of AutoCAD 3.0 for the HP-UX and DOS PCs, which was the first package to have a DOS interface. Although it wasn't the first package available for DOS, it became one of the most

Case study According to a study released by the Institute for Operations Research and the Management Sciences, it takes an average of 30 seconds per drawing for an AutoCAD user to switch to a model using a different software program. The study also found that the average AutoCAD user creates approximately 4% of all drawings, and is responsible for approximately 2.7% of all AutoCAD hours in the US. According to the study, these statistics indicate the significant amount of time wasted and money saved by the use of AutoCAD. History Autodesk was founded in 1982 by a group of ten AutoCAD programmers, including Thomas G. Myers, formerly a consultant in the software industry. The first version of

I have the following structure: Theme 1 - Page 1 (has_class 'page_1') - Page 2 (has_class 'page_2') - Page 3 (has_class 'page_3') - Page 4 (has_class 'page_4') Theme 2 - Page 1 (has_class 'page_1') - Page 2 (has_class 'page_2') - Page 3 (has_class 'page_3') - Page 4 (has_class 'page_4') I want to be able to add a class 'page_5' to Page 5, regardless of whether Theme 1 or Theme 2 is being used. I'm not sure how to approach this, so I'm open to a css solution or a js solution. I've not found a way of doing this at all yet. A: EDIT: This is a better solution, and will work if you add it in the theme functions.php file as it will get the current theme. function fp_page_customizer_pre_get_pages_data($pages) { $fp_page_customizer_pre_get_pages
