## **FULL PRO100 V4.16 Eng Full Libraries Manuals \_HOT\_**

I tried following the same procedures as in version 3.0. The 3.0 version of the software did not allow me to use the.xds files that I used to use to originally install the software. They were ignored and the installer would actually overwrite them with the new files from the.xds file. It is my understanding that the "new".xds files are newer versions of the.xds files that were used in the original install. The versions are not exactly the same, the file sizes are a little different and there have been updates to some of the files. However, it appears that the newer.xds files are ignored and overwritten. That is a problem as I use most of the.xds files that I have created for the 3.0 versions. My guess is that there is a coding mistake somewhere, but I would appreciate any input that you folks have on this. Thanks in advance David, if I get my PC to load Pro100 into Windows 3.0 again, I can prove to you that the.xds files still work. I can't do that right now, but if you provide the various help file files, I can use them to load the initial installation onto 3.0. You can then tell me whether or not the same issues are present and I will know what is causing the problems. There are a couple.xds files that I have that have been updated to the current.xds files. These files will cause errors. Pro100 v3.9.12 Pro100 v4.10.2 The entire help files from version 3.0 are perfectly valid, except the icons and the help files that I created for the version 4.10 software. They aren't valid on the 3.0 versions. The icons on the help files are the same as the icons used in the 3.0 version of the software. David David, when I can get the Pro100 v3.9.12 software installed on my PC, I will work on trying to get the v4.10.2 software installed. I will then go back to the Pro100 v3.0.x software and see if the same problems still persist or not. If you can provide the help files, I can work on them. Then, I will be able to help you and perhaps more people with the problems. If you can provide
