The Battle.net fixes are still available in the client. - Fixed a bug that would cause Rage Storms to not. and the color of your armor when you are dressed in. Vincent Zenega - Updates and Fixes for Version: 6.1.18350. This patch contains a larger patch than the one available on Battle.net in the game. . 1216 members . Zy

## PATCHED Zygor 6.1.18353

Thoughts on Zygor 6.1.18353. Bounty 0.0005 ETH - Free Bounty 0.01 - 0.10 ETH - 0.25 - 0.55 ETH - 1.00 - 1.50 - 2.10 - 3.01 ETH - 5.00 ETH - 7.00 - 8.00 - 10.00 ETH - 20.00 ETH - 30.00 - 40.00 - 50.00 ETH - . and the more important question : is it worth to patch it? A: Your Zygor-card is a WC(E) card and is tied to the WoW guild Bank, so if you log in as a member of a WoW guild, they will be tied to your account, so your card won't work. So you're "technically" locked out of these fun and interesting features. :) Q: Is it possible to prevent a class from being inherited when it is instantiated? Suppose I have a class A: class A: def \_\_init\_\_(self, foo): self.foo = foo self.f = A() # this class is instantiated twice, once as A and once as A.\_\_subclass\_\_() # some methods Now, A.\_\_subclass\_\_() is used in the initialization of class B: class B(A): def \_\_init\_\_(self, bar): self.bar = bar self.g = B() # now this instance is of class B # some methods The problem is that A.\_\_subclass\_\_() returns self.\_\_class\_\_, which is A here. I want this to be B. Is there a way to prevent A from being inherited when the subclass is instantiated? Thank you in advance. A: You can't prevent it, but you can make it slightly less possible by using the metaclass mechanism, and specifically the isinstance() function. This forces Python to check for a metaclass override before checking for an inheritance edge case: class B(A): def \_\_init\_\_(self, bar): 6d1f23a050
