I'm using pretty much the config that is in the quick start guide with a couple of modifications. The issue I'm having is that the URLs are not binding the ID of the parent object. For example, if I add the following endpoint: /user/username/home it returns the user with a valid representation. However, if I add another endpoint /user/username it returns the user with an empty representation with a 404. I have confirmed that in both cases Spring Data Rest is actually finding the User object, but it is not binding the ID to the URL. The URL returned in both cases is expected to be /user/username/home. It's as if the Spring Data Rest API is looking for the GET version of /user/username rather than the PUT version. Is this a bug, or am I making a mistake? Spring Data Rest config: @Configuration @EnableSpringDataWebSupport @Import({SecurityConfiguration.class}) public class HATEOASWebConfig { @Bean public RestTemplate restTemplate() { RestTemplate restTemplate = new RestTemplate(); restTemplate.setRequestFactory(httpRequestFactory()); return restTemplate; } @Bean public HttpComponentsMessageSender httpMessageSender(RestTemplate restTemplate) { HttpComponentsMessageSender messageSender = new HttpComponentsMessageSender(); messageSender.setRestTemplate(restTemplate); return messageSender; } @Bean public RestOperations restTemplateOperations() { RestTemplate restTemplate = new RestTemplate(); restTemplate.setRequestFactory(httpRequestFactory()); return new RestTemplateHttpComponentsMessageSender(restTemplate); } @Bean public HttpComponentsMessageHandler httpComponentsMessageHandler(RestTemplate restTemplate) { HttpComponentsMessageHandler handler = new HttpComponentsMessageHandler(); handler.setMessageSender(httpMessageSender(restTemplate)); return handler; } @Bean public Jackson2ObjectMapper jackson2ObjectMapper() { Jackson2ObjectMapperBuilder builder = new Jackson2ObjectMapperBuilder(); builder.modules(new Jdk8Module()); builder.indentOutput(true); builder.serializationInclusion(JsonInclude.Include);

Crysis 3 Cracked
Serial FileQ: Spring
Data Rest
HATEOAS URL Not
Binding Parent ID I
have a pretty
simple HATEOAS
design that can be
generated by
Spring Data Rest.
I'm using pretty
much the config
that is in the quick

start guide with a couple of modifications. The issue I'm having is that the URLs are not binding the ID of the parent object. For example, if I add the following endpoint: `/user/username/home` it returns the user

with a valid representation. However, if I add another endpoint `/user/username` it returns the user with an empty representation with a 404. I have confirmed that in both cases Spring Data Rest is actually finding the

User object, but it is not binding the ID to the URL. The URL returned in both cases is expected to be `/user/username/home`. It's as if the Spring Data Rest API is looking for the GET version of `/user/username` rather than the PUT

version. Is this a bug, or am I making a mistake?

Spring Data Rest config:

```
@Configuration @EnableSpringDataWebSupport @Import(SecurityConfiguration.class) public class HATEOASWebConfig { @Bean public
```

```
RestTemplate
restTemplate() {
    RestTemplate
    restTemplate =
        new
RestTemplate(); res
tTemplate.setRequ
estFactory(httpReq
uestFactory());
    return
    restTemplate; }
@Bean public Http
ComponentsMessa
```

```
messageSender httpMessageSender(RestTemplate restTemplate) {
    HttpComponentsMessageSender messageSender =
    new HttpComponentsMessageSender();
    messageSender.setRestTemplate(restTemplate);
    return messageSender;
}
```

```
@Bean public
RestOperations rest
TemplateOperation
